Quiz, 20 quest	ions

- 4		
- (1)
٠,		J
	-	

a matrix with two rows and three columns

Correct

The 'rbind' function treats vectors as if they were rows of a matrix. It then takes those vectors and binds them together row-wise to create a matrix.

- a vector of length 2
- a 3 by 3 matrix
- a 3 by 2 matrix

1/1 point

A key property of vectors in R is that

elements of a vector all must be of the same class

Correct

- a vector cannot have have attributes like dimensions
- elements of a vector can be of different classes
- elements of a vector can only be character or numeric
- the length of a vector must be less than 32,768

1/1 point

Suppose I have a list defined as x <- list(2, "a", "b", TRUE). What does x[[2]] give me? Select all that apply.

a character vector containing the letter "a".

Correct

a list containing character vector with the letter "a".

uiz, 20 ques	tions	20/20 points (100
	a character vector with the elements "a" and "b".	
Un-s	selected is correct	
	a list containing a character vector with the elements "a" and "b".	
Un-s	selected is correct	
	a character vector of length 1.

~	1/1 point	
9. Suppo	se I have a vector $x <- 1:4$ and a vector $y <- 2$. What is produced by the expression	x + y?
	an integer vector with elements 3, 2, 3, 4.	
	a numeric vector with elements 3, 2, 3, 6.	
	an integer vector with elements 3, 2, 3, 6.	
	a numeric vector with elements 3, 2, 3, 4.	
0	a numeric vector with elements 3, 4, 5, 6.	
Corr	rect	
	a numeric vector with elements 1, 2, 3, 6.	

1/1 point

10.

Suppose I have a vector x <- c(17, 14, 4, 5, 13, 12, 10) and I want to set all elements of this vector that are greater than 10 to be equal to 4. What R code achieves this? Select all that apply.

Quiz, 20 questions Correct

You can create a logical vector with the expression x > 10 and then use the [operator to subset the original vector x.

x[x >= 10] <- 4

Un-selected is correct

x[x > 4] < 10

Un-selected is correct

x[x > 10] == 4

Un-selected is correct

x[x >= 11] <- 4

Correct

You can create a logical vector with the expression $x \ge 11$ and then use the [operator to subset the original vector x.

x[x == 10] <- 4

Un-selected is correct

x[x < 10] <- 4

Un-selected is correct

x[x == 4] > 10

Un-selected is correct

Quiz, 20 questions

In the dataset provided for this Quiz, what are the column names of the dataset?

0	0

Ozone, Solar.R, Wind, Temp, Month, Day

Correct

You can get the column names of a data frame with the `names()' function.

- Month, Day, Temp, Wind
- 1, 2, 3, 4, 5, 6
- Ozone, Solar.R, Wind

1/1 point

12.

Extract the first 2 rows of the data frame and print them to the console. What does the output look like?

- 1 Ozone Solar.R Wind Temp Month Day 2 1 7 NA 6.9 74 5 11 3 2 35 274 10.3 82 7 17
- 1 Ozone Solar.R Wind Temp Month Day
 2 1 18 224 13.8 67 9 17
 3 2 NA 258 9.7 81 7 22
- 1 Ozone Solar.R Wind Temp Month Day
 2 1 41 190 7.4 67 5 1
 3 2 36 118 8.0 72 5 2

Correct

You can extract the first two rows using the [operator and an integer sequence to index the rows.

2	1	9	Solar.R 24	10.9	71	9	14
3	۷	18	131	8.0	76	9	29

1		0zone	Solar.R	Wind	Temp	Month	Day
2	152	11	44	9.7	62	5	20
3	153	108	223	8.0	85	7	25

1		0zone	Solar.R	Wind	Temp	Month	Day
2	152	31	244	10.9	78	8	19
3	153	29	127	9.7	82	6	7
